1 Exercise 8.6

Using your course dictionary, write a program to prompt the user for a course number and print out the associated course title and professor.

Answer appears after one blank page (so you don't peek).

Are you sure you're ready to peek?

2 Possible Solutions

```
In [ ]: course_dict = {'CANA100':(100, 'Oh, Canada!', 'J. Trudeau'),
                      'GEOG378':(378, 'Something about Python', 'S. Goring'),
                      'FLH0345':(345, 'Full House in modern popular culture', 'D. Tanner'),
                      'PAND843':(843, 'Graduate Seminar: Do you even Panda?', 'P. Anda')}

print "\n\nHere are the courses I've taken:"

for k in course_dict: print "%10s"%k

while True :
    s = raw_input("\nWhat's the course number? >")

    # Kills the program if we hit Enter:
    if len(s) < 1 : break

    if s in course_dict:
        print "I remember %s with %s, it was called %s" % (s, course_dict[s][2],course_dict[s][2])
    else:
        print "Yeah, I never took that course."
```
