1 Exercise 7.2

Create a string with 6 characters. Make a new string that is a concatenation of the first and last 2 characters.

Answer appears after one blank page (so you don't peek).

Are you sure you're ready to peek?

2 Possible Solutions

```
In [5]: x = 'GeoFTW'  
        print x[0] + x[-2:]
```

GTW

We're using basic concatenation using the + sign and then indexing the string. Fairly straightforward.
