SelfAssessment104

November 4, 2015

1 Exercise 10.4:

Write code to take the radius of a circle as command line argument and print out the area of the circle.

Answer appears after one blank page (so you don't peek).

Are you sure you're ready to peek?

2 Possible Solution

```
In [22]: import sys
         import math

         try:
             my_rad = sys.argval[1]
             print "The radius is %f" % my_rad ** 2 * math.pi
         except:
             print "Sorry I need a numeric value to calculate the radius."
```
